(54) Title: METHOD FOR A RANDOM-BASED DECISION-MAKING PROCESS

(57) Abstract: The method is for a random-based decision making process. A communication device (16) is activated and a menu (70) is displayed. In a selecting step (73) a random generating item (72, 74, 76, 78, 80, 82, 84, 92, 94, 81, 79, 100) is selected from the menu (70). The variables (21) are then defined and the variables may be provided with different weighing factors (36). A random generator (42) generates a random result (40) based on the weighed variables. The random result (40) is presented in the communication device (16). The presentation may be made at a random time, a specific time or right after the generation of the result.
